

REFERENCE INDEX

Every chokepoint and port from the four 2026 briefs, on one map

A geographic index, not a new analysis: every point here comes from the Hormuz, Suez & Red Sea, Horn of Africa, and Djibouti Port briefs' own maps, merged onto one shared basemap. Each brief measures its ports against a different baseline window - see each point's tooltip, and §2 below, before comparing magnitudes across briefs.

By Michael Schertz Tooling [logjam](#) (open-source) Generated 15 Sep 2026 Source IMF PortWatch
Method see § Method & provenance

CHOKEPOINTS MAPPED 3 Strait of Hormuz, Suez Canal, Bab el-Mandeb	PORTS MAPPED 15 Deduplicated across all four briefs' maps
SOURCE BRIEFS 4 Hormuz · Suez & Red Sea · Horn of Africa · Djibouti Port	OUT OF FRAME 1 Mombasa (Djibouti Port brief)

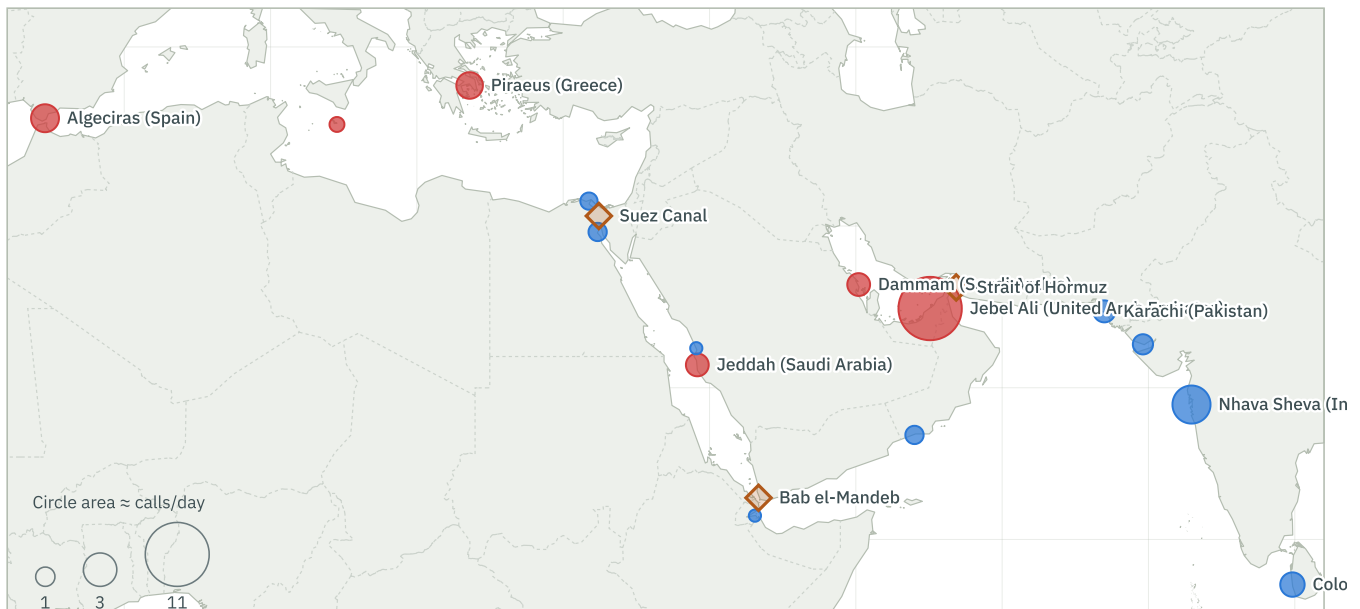

§ 1 Everything, in one frame

18 chokepoints and ports from the four briefs, deduplicated where the same port appeared on more than one brief's map (5 names collided; the most specific or most

recent brief's version was kept - see §2) and drawn on the same basemap used by the Suez & Red Sea brief (the widest of the three basemaps this tool has built). Bubble color follows each point's own brief: green gained container traffic against its own baseline, red lost it. Bubble size is the absolute daily change, again by each point's own brief - not on a common scale across briefs.

All four briefs, one map

Every chokepoint and port discussed across the 2026 disruption briefs

Basemap: Natural Earth 10m (public domain), the same 'corridor' window used by the Suez & Red Sea brief. Hover any point for its source brief and comparison window. Out of this basemap's frame and not shown: Mombasa (Djibouti Port brief).

§ 2 Why the numbers here are not one comparison

The four briefs do not all measure “current vs. baseline” the same way. The Suez & Red Sea and Horn of Africa briefs compare July 2026 against a fixed September-November 2023 pre-crisis window. The Hormuz and Djibouti Port briefs instead compare July 2026 against September 2025-February 2026, the immediate pre-diversion period, because several of their candidate ports grew for unrelated reasons between 2023 and 2025 and a 2023 comparison would conflate that growth with the diversion itself.

That means a point showing “+25%” from the Djibouti Port brief and a point showing “+25%” from the Suez & Red Sea brief are not the same kind of twenty-five percent -

they are measured from different starting points. This map is a geographic index of what the four briefs found, not a recomputed, unified comparison. For the exact methodology and figures behind any single point, read that point's own brief - named in its tooltip and in the table at the end of this page.

Every point on this map			
CHOKEPOINT / PORT	COUNTRY	SOURCE BRIEF	WINDOW
Bab el-Mandeb	—	Horn of Africa brief	Jul 2026 vs Sep-Nov 2023
Strait of Hormuz	—	Hormuz brief	Jul 2026 vs Sep 2025-Feb 2026
Suez Canal	—	Suez & Red Sea brief	Jul 2026 vs Sep-Nov 2023
Algeciras	Spain	Suez & Red Sea brief	Jul 2026 vs Sep-Nov 2023
Colombo	Sri Lanka	Suez & Red Sea brief	Jul 2026 vs Sep-Nov 2023
Damietta	Egypt	Hormuz brief	Jul 2026 vs Sep 2025-Feb 2026
Dammam	Saudi Arabia	Hormuz brief	Jul 2026 vs Sep 2025-Feb 2026
Djibouti	Djibouti	Horn of Africa brief	Jul 2026 vs Sep-Nov 2023
El Sokhna	Egypt	Suez & Red Sea brief	Jul 2026 vs Sep-Nov 2023
Jebel Ali	United Arab Emirates	Hormuz brief	Jul 2026 vs Sep 2025-Feb 2026
Jeddah	Saudi Arabia	Djibouti Port brief	Jul 2026 vs Sep 2025-Feb 2026
Karachi	Pakistan	Hormuz brief	Jul 2026 vs Sep 2025-Feb 2026
King Abdullah	Saudi Arabia	Djibouti Port brief	Jul 2026 vs Sep 2025-Feb 2026
Marsaxlokk	Malta	Suez & Red Sea brief	Jul 2026 vs Sep-Nov 2023

CHOKEPOINT / PORT	COUNTRY	SOURCE BRIEF	WINDOW
Mundra	India	Hormuz brief	Jul 2026 vs Sep 2025-Feb 2026
Nhava Sheva	India	Hormuz brief	Jul 2026 vs Sep 2025-Feb 2026
Piraeus	Greece	Suez & Red Sea brief	Jul 2026 vs Sep-Nov 2023
Salalah	Oman	Djibouti Port brief	Jul 2026 vs Sep 2025-Feb 2026

§ Method & provenance

Every figure in this brief is reproducible from a local database built by the open-source `logjam` tool and a single generator script. Nothing is hand-transcribed.

WHAT THIS IS

A geographic index built from the already-published map data of four independently generated briefs (Hormuz, Suez & Red Sea, Horn of Africa, Djibouti Port), not a new database query or a recomputed comparison. Every figure traces back to one of those four briefs' own `reports/data/*.json` payload.

BASELINES DIFFER BY BRIEF

The Suez & Red Sea and Horn of Africa briefs compare against a fixed September-November 2023 pre-crisis quarter. The Hormuz and Djibouti Port briefs compare against September 2025-February 2026 instead, for their reroute/competitor reads specifically. Do not compare percent-change magnitudes across points from different source briefs - compare only within one brief, or read the underlying brief for the full picture.

DEDUPLICATION

When the same port appeared on more than one source brief's map, this script kept one version, by a fixed priority order (Djibouti Port brief, then Horn of Africa, then Suez & Red Sea, then Hormuz - the more specific or more recent brief about that port's region wins). The table above and each point's tooltip name which brief's version is shown.

BASEMAP

The 'corridor' basemap (the same one the Suez & Red Sea brief uses) - the widest of the three basemaps this tool has built. A small number of points from the source briefs can fall outside its frame; any such point is listed in the 'Out of frame' tile above and named in §1's figure caption, and is not silently dropped.

REPRODUCE

Generate the four source briefs first (`uv run python scripts/reports/hormuz_container_2026.py`, `seuz_redsea_2026.py`, `horn_of_africa_2026.py`, `djibouti_port_2026.py`), then `uv run python scripts/reports/global_map_2026.py`. Full method in `docs/METHODOLOGY.md`.

Limitations

- This is an index of the four briefs' own map data, not an independent analysis - any error or judgment call in a source brief (its baseline window, its port candidate list, its rounding) carries through to this map unchanged.
- Percent-change and absolute-change figures are not on a common baseline across source briefs; see §2. Do not read this map as a single ranked comparison of who gained or lost most.
- Points outside the 'corridor' basemap's frame are omitted from the map (though listed in the tiles/caption above), not relocated or approximated: Mombasa (Djibouti Port brief).
- Where the same port appeared in more than one source brief with different figures, only one version is shown here (see §2's deduplication note) - the other brief's figure for that same port may differ and is not shown.
